PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/675,871	<b>Applicant(s)</b> BUSCH, FRANCIS	
	<b>Examiner</b> Lakshmi S. Channavajjala	<b>Art Unit</b> 1615	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 15 March 2007.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-5 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-5 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

Receipt of response dated 3-15-07 is acknowledged.

Claims 1-5 are pending in the instant application.

### ***Response to Arguments***

Applicant's arguments filed 3-15-07 have been fully considered but they are not persuasive.

The following rejection of record has been maintained:

### ***Claim Rejections - 35 USC § 103***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

1. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,726,729 ('729) to Patel in view of US 5,474,578 to Chan et al ('578) or Chan in view of Patel or unpatentable over US 5,474,578 ('578) to Chan et al in view of US 6,010,990 to Rousso et al ('990) or '729 to Patel in view of '990 to Rousso.

Instant claims are directed to a method of increasing the health and appearance of the hair and scalp by supplying oxygen directly to the scalp and hair, comprising wetting the hair, applying to the scalp and hair a shampoo having a pH of 8 to 11 and followed by applying to the scalp a conditioning cream containing 1% to 4% hydrogen peroxide, wherein the pH of the scalp and hair remains at pH of 8 to 10.

'729 teaches a method of permanently dyeing hair comprising subjecting the hair to a treatment wherein the hair is contacted with a freshly made mixture of ai) an

Art Unit: 1615

oxidative dye intermediate in a shampoo base at an alkaline pH and b) an oxidative compound in a shampoo or a conditioner base at acidic pH (col. 11, L 20-62; col. 12, L 58 through col. 13, L 20 and example 1 in col. 14). '729 teach packing the above two parts separately in a kit and freshly mix before using or even mix on the scalp itself because the oxidizing part is unstable (col. 11, 33-35). '729 further teach incorporating the claimed surfactants (col. 9-10). '729 teach that the treatment time varies between 10 seconds to two minutes, thus suggesting that the oxidizing agent of part aii should be released within 10 seconds to 2 minutes. While '729 fails to teach the claimed conditioner cream, adjusting pH sodium carbonate (teaches sodium hydroxide –see example 1), '729 teaches the concept of applying a hydrogen peroxide containing conditioner base to the scalp after or along with a shampoo base, wherein the shampoo has alkaline pH. '729 does not teach the claimed limitation of maintaining the pH of the hair and scalp at an alkaline pH after applying the hydrogen peroxide composition and instead teaches that the part aii) is acidic.

'578 teaches an erasable hair dyeing process comprising contacting hair with a dye present in a shampoo base that imparts a second color to the hair that already has a color and subsequently contacting alkaline peroxide (3% hydrogen peroxide), wherein the visual appearance of the hair color imparted by the dye is restored (abstract, col. 3, L 34-col. 4, L 60, example 5 in col. 8). Thus, both '729 and '578 teach hair dyeing compositions for imparting the desired color strength to the hair by applying hydrogen peroxide after the hair dyeing step, wherein the hair dye is present in a shampoo base. While '729 teach that the shampoo has an alkaline pH, '578 teach that the hydrogen

peroxide containing composition is in an alkaline pH. '578 further teach that hydrogen peroxide treatment imparts a visual appearance retaining the first color. Thus, in the absence of any unexpected advantage of maintaining the alkaline pH after peroxide treatment, it would have been obvious for one of an ordinary skill in the art at the time of the instant invention to adjust the pH of the peroxide containing composition to also to an acidic or an alkaline level and still achieve the desired hair color.

Alternatively, '578 do not teach maintaining alkaline pH of the shampoo containing the dye.

'990 teaches a hair shampoo or conditioner composition in the form of lotions, creams etc., wherein the composition has an alkaline pH of 8 to 10 (abstract, col. 2, L 37-68, col. 3, L 10-40). The composition of '990 comprises surfactants (col. 5-6), cationic polymers etc (examples). It would have been obvious for one of an ordinary skill in the art at the time of the instant invention to adjust the pH of the shampoo and hydrogen peroxide containing composition of '729 or '578 because '990 suggests that the alkaline pH (8 to 10) imparts body, fullness and texture to the fine hair in a very short time i.e., one minute or less (last lines of col. 2). Thus, one of an ordinary skill in the art would have expected to increase visual and tactile properties of hair i.e., thickness and texture by adjusting the pH of the composition to an alkalinity.

Applicant's arguments filed 3-15-07 have been fully considered but they are not persuasive.

Applicants' argue that in the instant invention, the health and appearance of hair and scalp are improved by directly applying oxygen to hair and scalp. It is argued that the two references US patents 6726729 and 5474578 use hydrogen peroxide for chemical reaction with dye stuffs (in hair dyeing) and is not the same as converting to oxygen without reacting with another compounds. It is argued that unlike the above patents, instant invention does not employ hydrogen peroxide to oxidize the dye. Applicants' arguments are not persuasive because instant claim recites that component c) is a conditioning cream and the phrase "containing" is interpreted as comprising, which allows for dye stuff of the prior art. Further, instant claims do not specifically exclude dyes or the oxidation of dyes in addition to supplying of oxygen. It is argued that US 6010990 uses high pH formulation and from the same product add a polymer to increase the diameter of the hair. It is argued that instant claims require one or more surfactants in combination with pH, which is not the same as the prior art because the prior art does not perform the second step as claimed. However, while the instant second step only requires applying a shampoo with a pH between 8.0 and 11.0, instant claim does not exclude the presence of the polymer of the prior art nor the increase in the diameter. In fact, the latter effect is one of the advantages seen with present invention (described on page 2, lines 1-3 of instant disclosure). On the other hand the prior art references 5475578 and 6010990, both recognize the importance of alkaline pH (pH Of 8 to 10, within the claimed range) for imparting color (reads on instant appearance) and body as well as texture.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

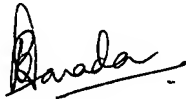

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lakshmi S. Channavajjala whose telephone number is 571-272-0591. The examiner can normally be reached on 7.00 AM -4.00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Woodward can be reached on 571-272-8373. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
